

STRATEGIES FOR ADDING, SUBTRACTING

ADDITION

Front end/Splitting both numbers

$$\begin{array}{r} 20 + 40 = 60 \\ 8 + 5 = \underline{13} \\ \hline 73 \end{array}$$

$$\begin{array}{r} 20 + 8 \\ + 40 + 5 \\ \hline 60 + 13 = 73 \quad (60 + 10 + 3) \end{array}$$

$$\begin{array}{r} 28 \\ + 45 \\ \hline 13 \text{ (add ones)} \\ \underline{60} \text{ (add tens)} \\ 73 \end{array}$$

**Keeping One Number Whole, Taking Friendly Jumps
(Shown on Open Number Lines)**

STRATEGIES FOR ADDING, SUBTRACTING

ADDITION continued

$$28 + 45$$

Or smaller friendly jumps of 10
(Shown on Open Number Lines)

Compensation

For $28 + 45$, think “I know $30 + 45 = 75$
I added 2 extra so I need to subtract them”:
 $75 - 2 = 73$

Take 2 from 45 and give it to 28 to make a friendly number (30):

$$\begin{array}{r} 28 + 45 \\ +2 \downarrow \quad \downarrow -2 \\ 30 + 43 = 73 \end{array}$$

SUBTRACTION 94 - 49

**Keeping One Number Whole, Taking Friendly Jumps
(Shown on Open Number Lines)**

Think addition: $49 + \square = 94$

Splitting both numbers

$94 - 49$: There won't be enough ones, so I'll split 94 this way:

$$\begin{array}{r} 94 = 80 + 14 \\ - 49 = \underline{40 + 9} \quad \text{Now I can subtract} \\ 40 + 5 = 45 \end{array}$$

STRATEGIES FOR ADDING, SUBTRACTING

SUBTRACTION

$$94 - 49$$

cont'd

Compensation

For $94 - 49$, think "I know $94 - 50 = 44$

I subtracted 1 extra so I need to add it back":

$$44 + 1 = 45$$

Constant Difference

Add 1 to both numbers to make a friendly number (50):

$$\begin{array}{r} 94 - 49 \\ +1 \downarrow \quad \downarrow +1 \\ 95 - 50 = 45 \end{array}$$
